Hi Julien,

sure, in that case we have to charge 160 Euros per TB. Are you going to use your local GIN instance for the CRC?

Nice website!

Best,
Thomas

Dear Thomas,

We need to get our numbers for the next CRC application. Should we budget a fee for the publication of data on GIN (only the publication, backup service will be done on site) ? Can you make a quote ?

Between 2022 and 2026, we should get about 150 TB of data to be published, and GIN might be the default repository for it.

PS: Tamara from the CRC135 is building a home for the gin-tonic project: <https://gin-tonic.netlify.app/> (pretty empty so far)
